

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An electronic camera, comprising:

*A*  
*Cont*  
an imaging device which captures ~~an image of an object in a~~  
~~cycle by exposure for a period corresponding to the cycle, and~~  
~~outputs image signals updated in the cycle~~ a sequence of images of  
an object and outputs image signals for said sequence of images at  
a rate defined by an imaging cycle of said imaging device, said  
imaging cycle defining a maximum exposure period for said imaging  
device;

a changing device which changes the cycle of the imaging  
device, thereby changing the maximum exposure period for said  
imaging device;

a display; and

a controller which ~~makes~~ controls the display to display said  
sequence of images ~~the image~~ according to the image signals while  
the imaging device is capturing subsequent images ~~the image~~, such  
that said display ~~whereby~~ shows a live image ~~on the display to~~  
enable determination of an image-capturing angle of view.

2. (Original) The electronic camera as defined in claim 1,  
wherein the changing device is manually operated to change the  
cycle of the imaging device.

3. (Original) The electronic camera as defined in claim 1, wherein the changing device automatically changes the cycle of the imaging device.

*a1*  
*cancel*  
4.-15. (Cancelled).

16. (New) The electronic camera as defined in claim 1, further comprising:

a signal processor for processing and temporarily storing image signals output by said imaging device before output to said display.

17. (New) The electronic camera as defined in claim 16, further comprising a memory card for storing select images output by said imaging device.

18. (New) The electronic camera as defined in claim 1, wherein said rate is a video rate, and said changing device changes said video rate to enable said imaging device to output brighter images.

19. (New) The electronic camera as defined in claim 1, wherein said imaging device includes a CCD.
